DETAILED ACTION

Election/Restrictions

1a. Newly submitted claims 21-28 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Claims 21-28 pertains to a system for hydrothermal treatment of a reactant. Claims 1-12, original elected claims, pertain to a liner. The liner can be used in a casting environment.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 21-28 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Terminal Disclaimer

1. The terminal disclaimer filed on May 19, 2004 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent 6,576,185 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hervert et al (US '632). and further in view of Hazlebeck (US 6,238,568).

Hervert et al disclose a liner for hydrothermal pressure vessel comprise of a porous layer, a non porous layer, wherein the porous layer is between the non-porous and the wall chamber (figure 1) and a seal for coupling a non-porous layer to the wall (col. 4, lines 30-32). A connector (15) extending through the wall for conveying operational information. A pressure, flow, and chemical sensor (col. 4, lines 45-50) for sensing leaking and flow in the porous layer. In addition, Hervert et al disclose a partition (12 and 13) between the non-porous layer and wall for dividing the porous layer into first and second sections (figure 2), a mean for fluid communication between the first and second porous section as shown in the figures.

Hervert et al fail to teach a pump in fluid communication with the connector.

However, Hazelbeck discloses a pump (68) for the purpose of cooling the reactor (col. 7, lines 35-40).

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide a pump as taught by Hazelbeck, in Hervert et al in order to cool the reactor.

Response to Arguments

4. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 1725

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
